PRODUCT WALKTHROUGH · DESIGN PROTOTYPE V0.1

Good morning. Here's what matters.

DESIGN PROTOTYPE — SAMPLE EDITION. The organisations, people, quotes and figures in this edition are fictional and are not current news.

FRIDAY, 2 OCTOBER 2026 — YOUR 5-MINUTE EDITION

Over Coffee

AI · FOOD · FARMING — Good morning. Here's what matters. — EIGHT THINGS WORTH KNOWING TODAY

WHEAT HARVEST FORECAST	KESTREL 4 API PRICE	AI CHIP LEAD TIME	FIRMS RUNNING AI IN PRODUCTION
24.6 m tonnes	$1.20 per M tokens	9 weeks	38%
▼ from 26.5 · September estimate	▼ from $3.00 · Kestrel 3	▼ from 26 · A year ago	▲ from 22% · A year ago

FARMING · HARVEST OUTLOOK · CONFIRMED

A dry September cuts the wheat forecast by 7%, and the effects reach well beyond the farm

The National Grain Council now expects 24.6 million tonnes. Futures are at a four-month high; millers and bakers are watching.

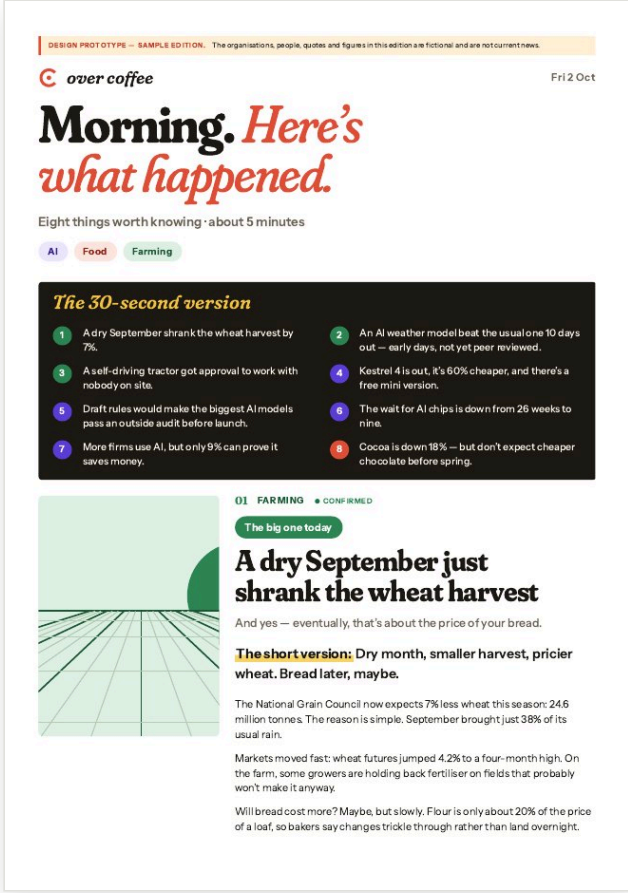

The National Grain Council cut its forecast for the 2026/27 wheat harvest by 7% on Thursday, to 24.6 million tonnes. September rainfall across the main growing regions was 38% of the long-term average.

Wheat futures rose 4.2% to a four-month high after the revision. On drought-hit fields, some growers are reducing nitrogen applications rather than spending on crops unlikely to reach yield targets.

Further along the chain, the Bakers' Federation says flour makes up roughly 20% of the price of a standard loaf, so a sustained rise in wheat would reach bread prices gradually rather than all at once.

TODAY IN BRIEF

1. The wheat harvest forecast was cut 7% after a dry September; futures hit a four-month high.
2. An AI weather model beat physics-based forecasts at 10 days in an early, unreviewed study.
3. A driverless tractor was approved to work with no operator on site.
4. Kestrel Labs cut its API price 60% with Kestrel 4 and released a smaller open-weights model.
5. A draft code would require independent audits before the most capable AI models are released.
6. Varda says waits for AI chips are down to nine weeks from 26 – the shortage is easing.
7. AI in production rose to 38% of surveyed firms, but only 9% report savings.
8. Cocoa is down 18% in a month on a bigger harvest – but shelf prices will take months to follow.

DESIGN PROTOTYPE — SAMPLE EDITION. The organisations, people, quotes and figures in this edition are fictional and are not current news.

over coffee — Fri 2 Oct

Morning. *Here's what happened.*

Eight things worth knowing · about 5 minutes

AI · Food · Farming

The 30-second version

1. A dry September shrank the wheat harvest by 7%.
2. An AI weather model beat the usual one 10 days out — early days, not yet peer reviewed.
3. A self-driving tractor got approval to work with nobody on site.
4. Kestrel 4 is out, it's 60% cheaper, and there's a free mini version.
5. Draft rules would make the biggest AI models pass an outside audit before launch.
6. The wait for AI chips is down from 26 weeks to nine.
7. More firms use AI, but only 9% can prove it saves money.
8. Cocoa is down 18% — but don't expect cheaper chocolate before spring.

01 FARMING · CONFIRMED

The big one today

A dry September just shrank the wheat harvest

And yes — eventually, that's about the price of your bread.

The short version: Dry month, smaller harvest, pricier wheat. Bread later, maybe.

The National Grain Council now expects 7% less wheat this season: 24.6 million tonnes. The reason is simple. September brought just 38% of its usual rain.

Markets moved fast: wheat futures jumped 4.2% to a four-month high. On the farm, some growers are holding back fertiliser on fields that probably won't make it anyway.

Will bread cost more? Maybe, but slowly. Flour is only about 20% of the price of a loaf, so bakers say changes trickle through rather than land overnight.

Everything in one place — no links required.

DESIGN PROTOTYPE — SAMPLE EDITION. Every organisation, person, quote and figure in the newspapers is fictional and was written to exercise the product. None of it is current news. The software, the editorial engine and the design are real.

HOW TO COMMENT

Every screen has a number: **S01–S36** for the app, **N1–N4** for the four newspapers. Comment by number — for example "S08: the lead headline is too long" or "N4 page 3: the quiz feels busy". A feedback sheet at the end lists every number with space for notes.

WHAT THE SCREENSHOTS ARE

Real captures of the running app at desktop width (1440 px) and phone width (390 px), and the real PDFs it produces. Nothing is mocked up.

H The four newspapers — N1–N4

I What's real, what's sample, what's next

J Feedback sheet

A personal daily newspaper you can finish over a cup of coffee.

The world produces more information than anyone can read. Over Coffee asks one question every morning – what actually matters to this person today? – and answers it with a finite, edited newspaper.

The newspaper is the destination

Open, read, understand, finish. No feed, no infinite scroll. Every edition ends with "You're done."

Time is an editorial budget

5, 10 or 20 minutes is a ceiling, not a quota. A quiet day looks quiet; silence is valid.

Edited, not generated

Events, not articles. Duplicate reporting is collapsed, claims are verified against sources, and an editor decides what deserves space – and records why.

Trust is structural

Every claim traces Claim → Event → Source with a visible status. A quality gate refuses unsupported numbers, altered quotes and hidden uncertainty.

One engine, two experiences

Business (precise, calm) and Social (a friend catching you up) are two renderings of one stored edition – never a second research pass.

The depth is optional

Newspaper → Story → Sources → Original. "Learn more" exists for the curious; the paper works perfectly without it.

TODAY'S SAMPLE EDITION, IN NUMBERS (AI · FOOD · FARMING, 10-MINUTE BUDGET)

41	16	8	5	11/11
ARTICLES RESEARCHED	DEVELOPMENTS	PUBLISHED	MINUTES TO READ	QUALITY CHECKS

3 · BRAND

The full stop.

An open ring – a C, and the O of a page turned to the light – around a solid point. A full stop is the brand's promise: the edition ends. Seen from above it is also, quietly, a cup and the first light of the morning, without ever drawing either.

TYPE — SELF-HOSTED, OPEN LICENCE

Newsreader

Business headlines and body. Designed for news; optical sizes from captions to mastheads.

Fraunces

Social headlines. Soft, expressive, a little wonky – personality without childishness.

Instrument Sans

Labels, kickers, metadata, and Social body text.

RULES

- No cartoon cups, no clip-art, no gradients for decoration.
- Illustration is geometric and generated per story – never a fake photograph.
- Colour carries meaning: verification status, and topic in Social.

Fourteen stages, run once per reader per day.

The complexity stays behind the scenes. The result is one stored edition that every format renders.

01	**Wake up** – topics, budget, mode, today-only changes
02	**Understand** – plain-language interests → topics
03	**Expand** – AI → companies, releases, regulation, hardware…
04	**Research** – per-topic, cached and shared between readers
05	**Detect events** – what actually happened
06	**Cluster** – five reports of one launch = one event
07	**Verify** – claim status from the evidence
08	**Prioritize** – relevance, significance, freshness, source quality, corroboration
09	**Edit** – the bar, the budget, the depth of each story
10	**Write** – both voices from the same verified claims
11	**Quality check** – 11 checks, both voices; failing stories are pulled
12	**Generate** – summary, one thing to remember, audio script
13	**Deliver** – web, PDF, audio, email
14	**Done** – the reader has their newspaper

VERIFICATION LABELS THE READER SEES

• CONFIRMED
Primary source or two independent outlets.

• REPORTED
One credible outlet, or an organisation's own figure.

• INTERPRETATION
Analysis or opinion, attributed.

○ EMERGING
Early evidence, e.g. not yet peer reviewed.

○ UNVERIFIED
Claimed but disputed or unconfirmed.

THE READING BUDGET, IN PRACTICE (AI · FOOD · FARMING)

BUDGET	BAR	STORIES	READS IN	WHAT CHANGES
5 min	0.84	4	~3 min	Only the most significant developments; Food is honestly quiet
10 min	0.77	8	~5 min	The day's important developments, top three in full depth
20 min	0.62	12	~7 min	More context and a few more stories — and still budget left unused

SECTION A

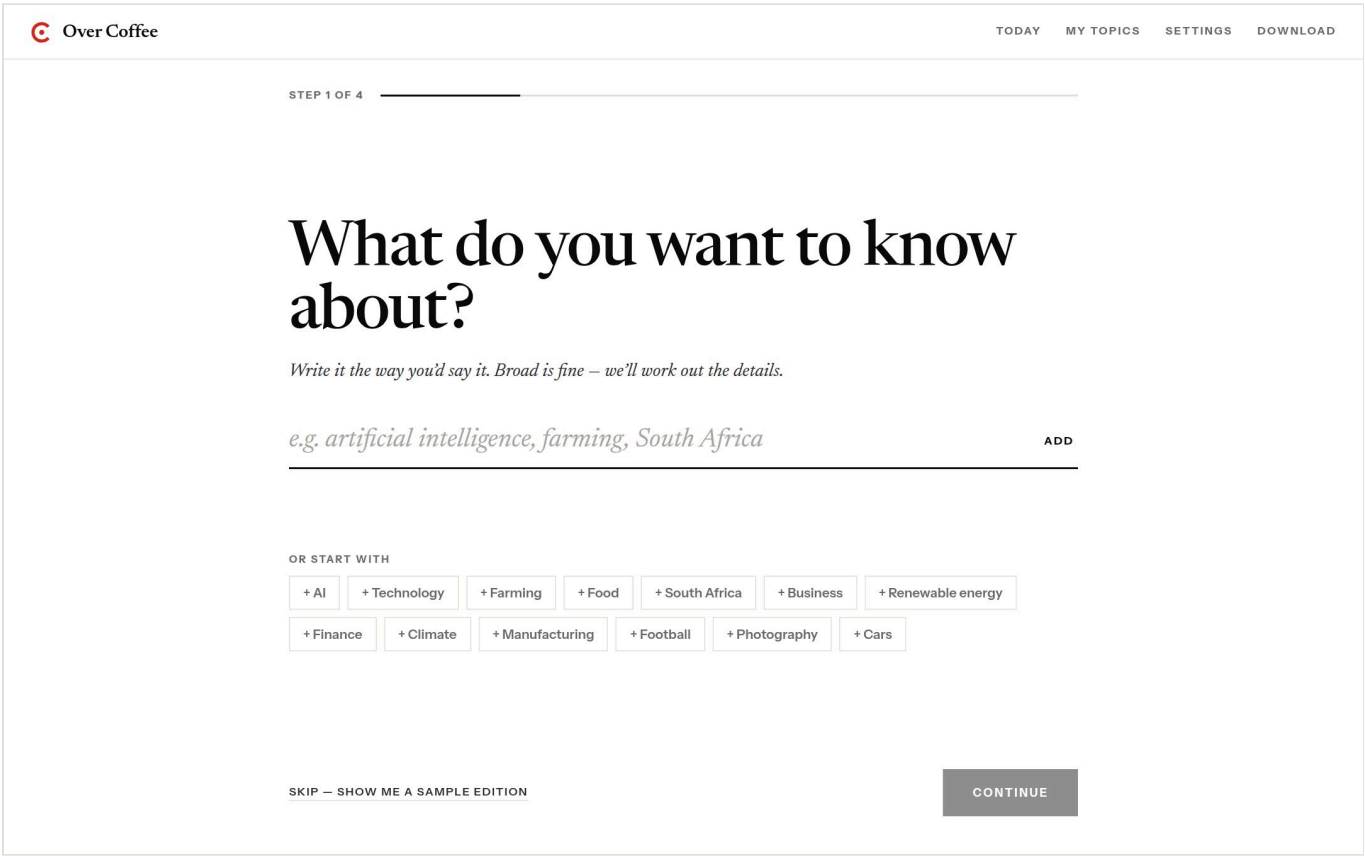

Arriving

From first open to first newspaper in five short steps. Onboarding asks only what the editor cannot work out alone.

S01 What do you want to know about?

#/welcome

The first question, in the reader's own words. No category trees, no hundred filters.

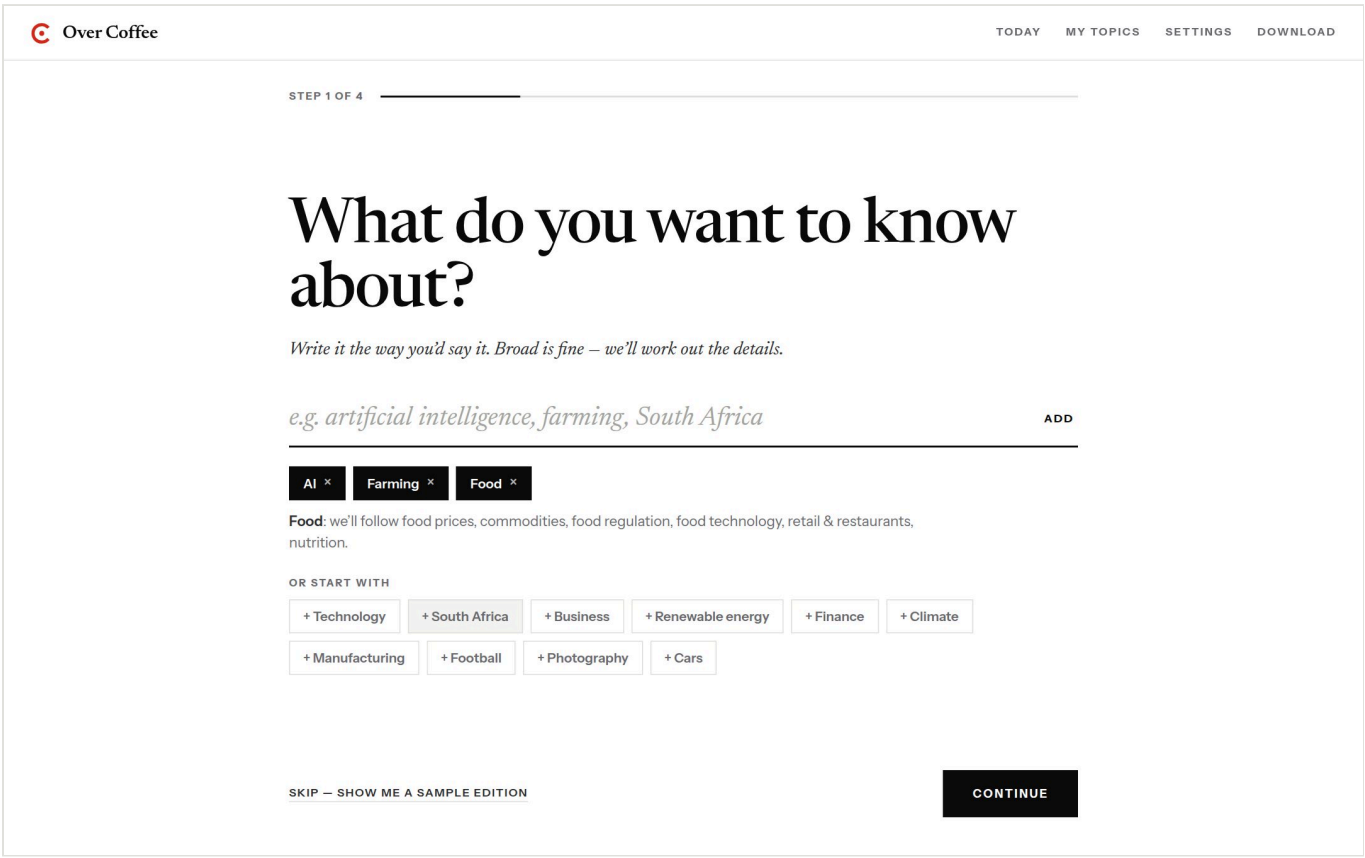

- The tone of the opening question
- Suggested topics as quiet text chips, not icons
- "Skip — show me a sample edition" for the impatient

S02 Interests, understood

#/welcome

“artificial intelligence, agriculture” was typed; the engine mapped it to AI and Farming and shows how it will expand the last topic into research areas.

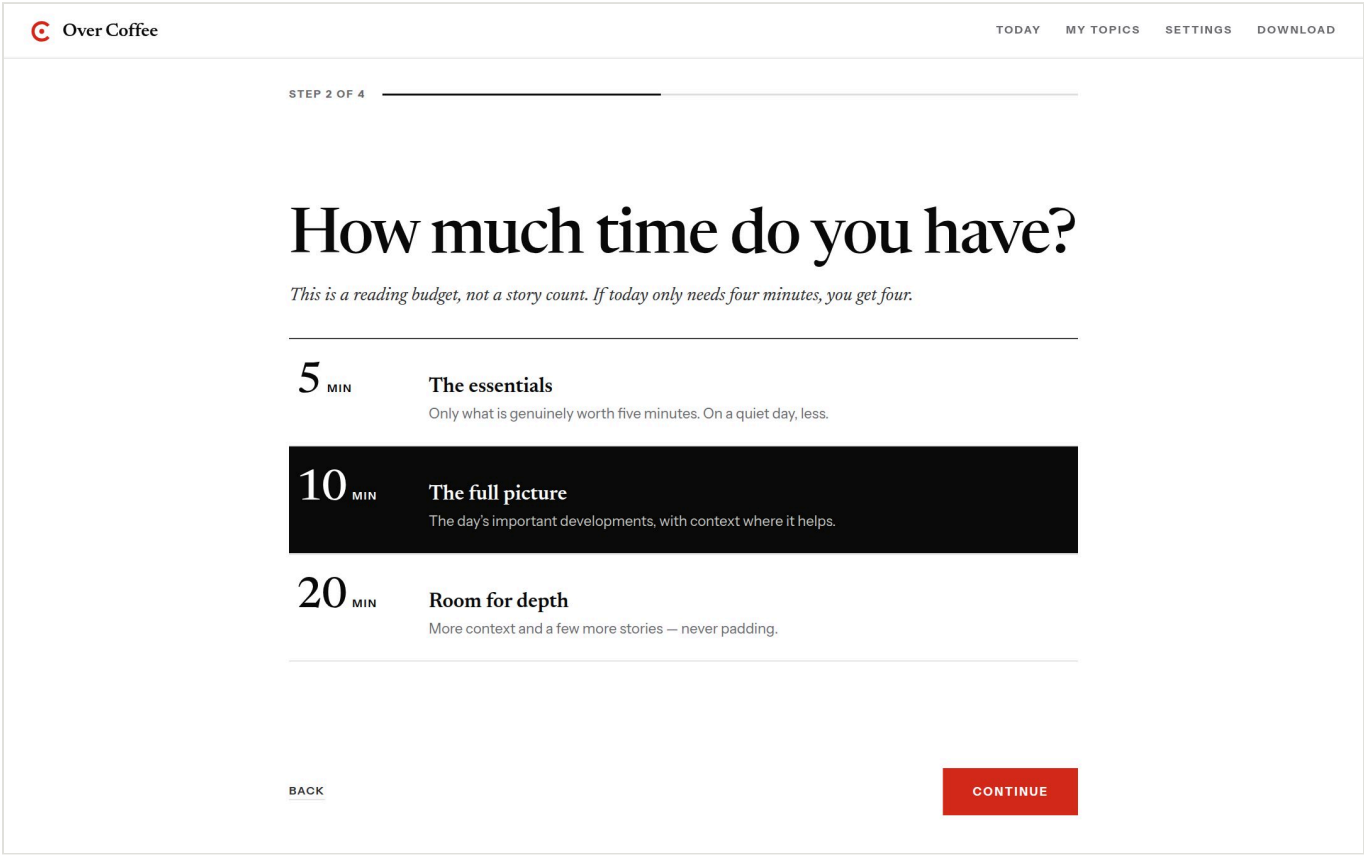

- Plain-language interpretation (agriculture → Farming)
- The expansion line: what “AI” will actually cover
- Typos and unknown topics are accepted rather than rejected

S03 How much time do you have?

#/welcome?step=2

Five, ten or twenty minutes — framed as a reading budget, never a story count.

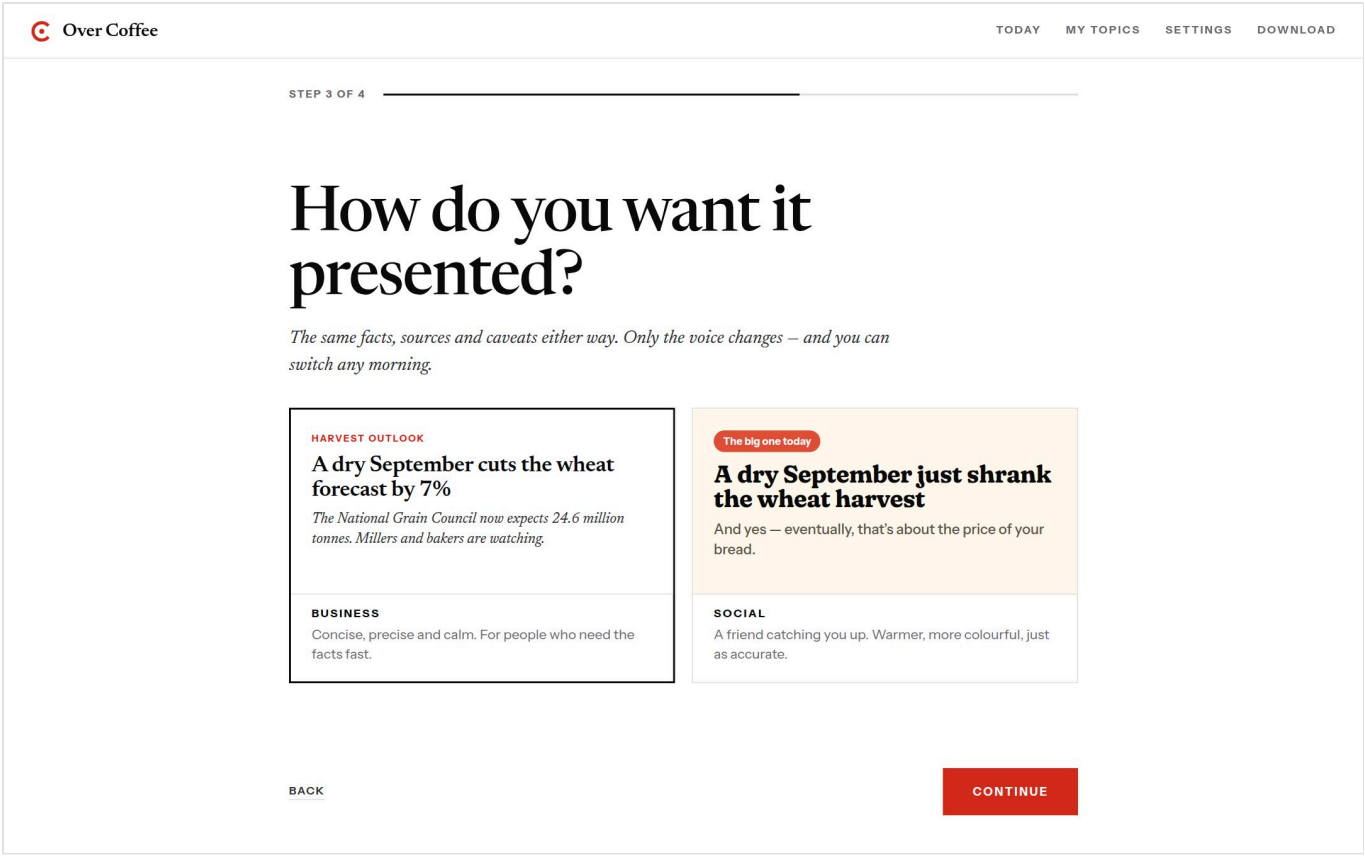

- "If today only needs four minutes, you get four."

S04 How do you want it presented?

#/welcome?step=3

Business or Social, shown with the same real story in each voice so the choice is concrete.

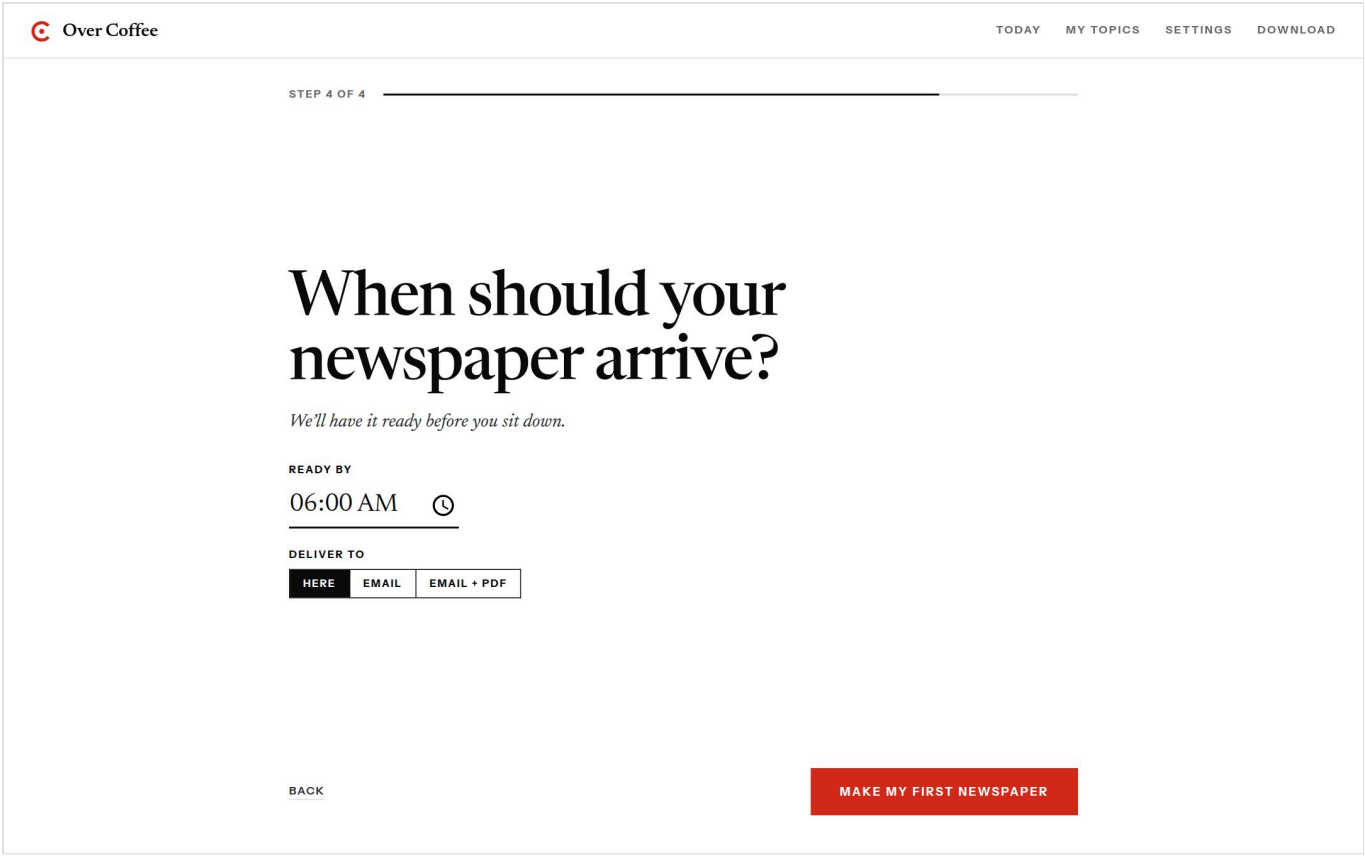

- The two sample cards are the actual wheat story in both voices

S05 When should your newspaper arrive?

#/welcome?step=4

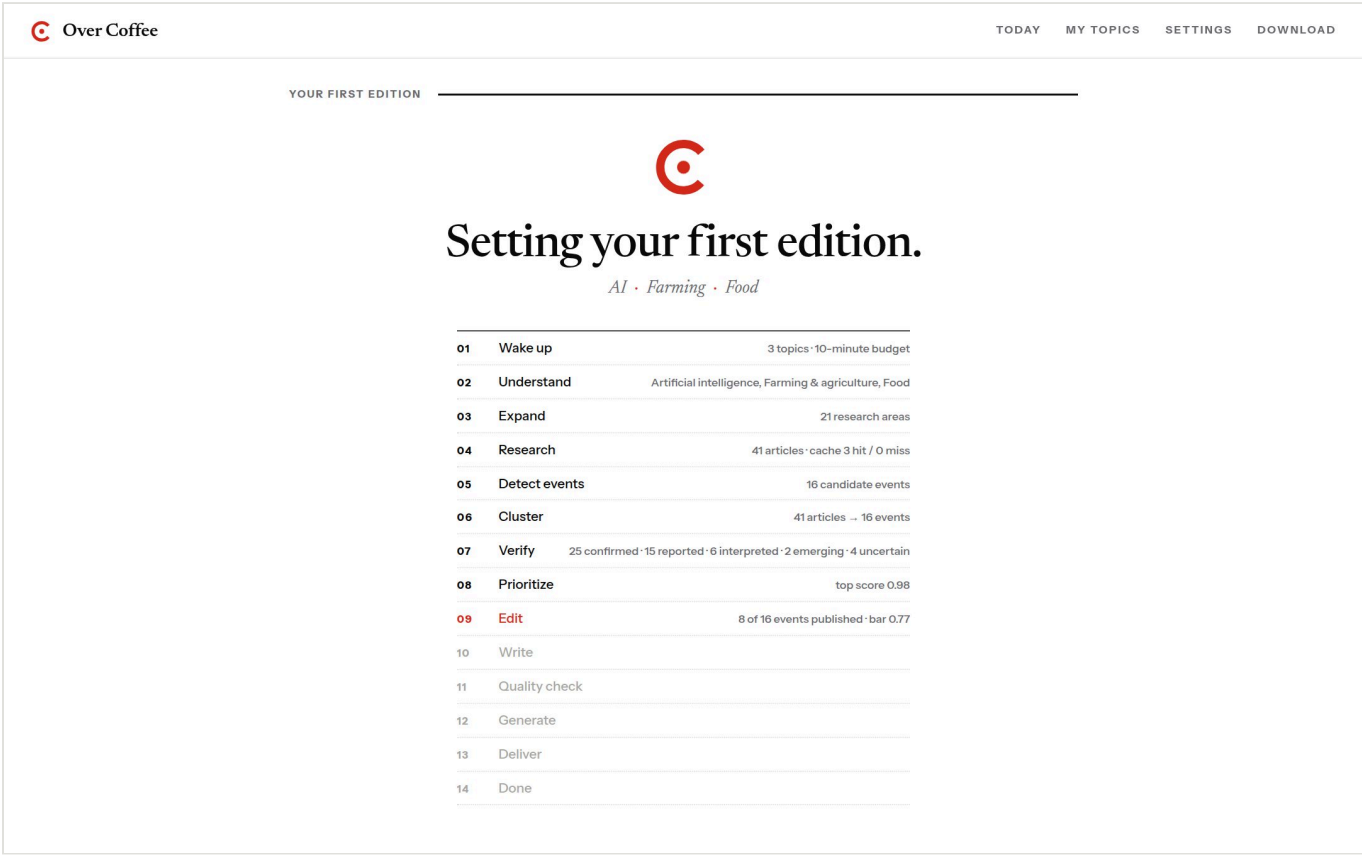

Delivery time and channel. Everything else defaults to “let the editor decide”.

S06 Setting your first edition

#/welcome?step=5

The loading state is the engine's real stage log, replayed: 41 articles, 16 events, verification counts, the editorial bar. The mark draws itself while the edition is set.

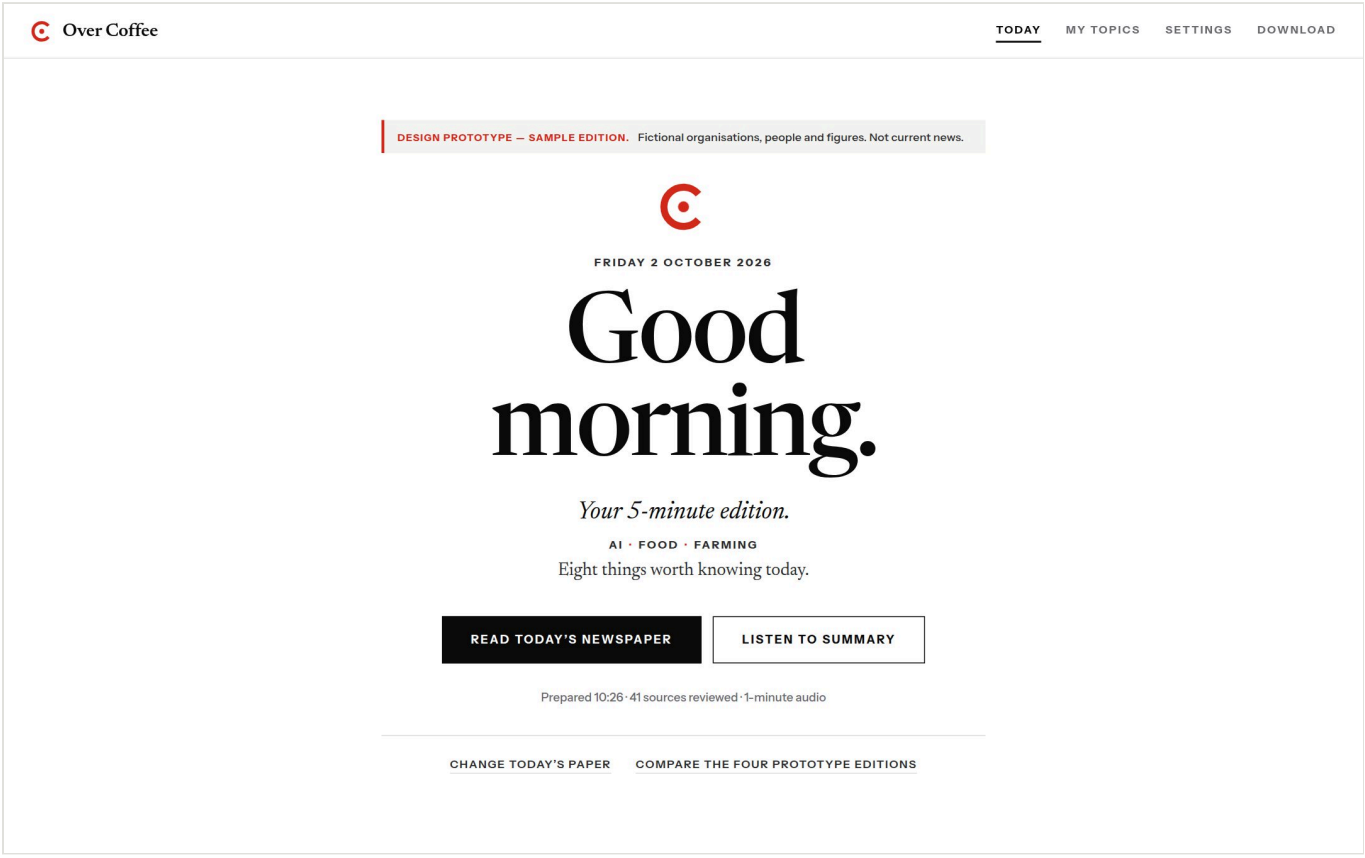

- Each line is a real pipeline stage and its real note

S07 Home — the entrance to the publication

#/

Not a dashboard. Date, a greeting, the size of today's edition, the reader's topics, and two actions.

- "Your 5-minute edition" on a 10-minute budget: no padding
- Prepared time, sources reviewed, audio length — small, honest metadata
- Change today's paper, and the four prototype editions, as quiet links

SECTION B

The newspaper — Business edition

The primary product surface. A finite newspaper: masthead, front page, sections decided by the editor, and an ending.

S08 Front page

#/read/…?mode=business

A black dateline bar with the mark, the masthead, then a key-figures strip: the day's headline numbers at a glance, every one sourced. Below, a lead chosen on significance (here Farming, not AI) and a rail with Today in brief, a black "One thing to remember" takeaway and the edition index.

- Key figures show the previous value, never a computed change
- Verification label next to every kicker (Confirmed / Reported / Emerging …)
- Two-column lead with drop cap, chart, "Why it matters / What changed / What happens next"
- "Learn more" as a quiet continuation, not a button
- Section sizes in the index are unequal on purpose: Farming 3 · AI 4 · Food 1

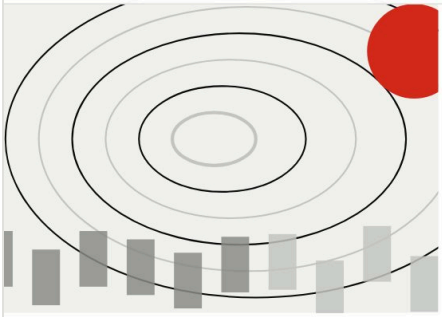

S09 Section — Farming

Sections are ruled, columned and ordered by their strongest story. The weather study sits in Farming for this reader and is tagged “Also matters for AI” — one event, one story.

Farming

LEAD STORY ON THE FRONT PAGE · 2 MORE STORIES

TODAY MY TOPICS SETTING

A learned weather model beats physics on 10-day forecasts, in a study not yet peer reviewed

The Northern Meteorological Service will run it alongside its existing model from November. Growers are watching closely.

A machine-learning weather model developed by the Northern Meteorological Service and Aster Systems was more accurate than the leading physics-based model on 87% of the variables tested over a two-year evaluation, according to a preprint published this week. The paper has not yet been peer reviewed.

The service will run the model operationally alongside its physics model from November, while continuing to issue official forecasts from the physics model.

For agriculture, the useful horizon matters most. Agronomists say a reliable 10-day window would change how growers time planting, spraying and harvest.

WHY IT MATTERS

Medium-range forecasts drive costly decisions in farming, energy and logistics. A real improvement in the 10-day window has value well beyond meteorology.

WHAT HAPPENS NEXT

Peer review, and the service’s own side-by-side evaluation over the winter.

Also matters for AI

LEARN MORE →

Driverless tractor cleared to work fields with no operator on site

One supervisor may oversee up to four machines remotely. Contractors cite night-shift labour shortages.

The Agricultural Machinery Safety Authority has approved the Fieldwright AT-7 for fully autonomous field operation without an operator on site, subject to geofencing and remote supervision of up to four machines per supervisor.

Fieldwright says deliveries begin in March 2027 and the tractor will be offered as a subscription. Contractors say harvest labour shortages are the main source of interest.

WHY IT MATTERS

Approval without an on-site operator is the regulatory step that turns autonomy from a demonstration into a labour model.

AI

4 STORIES

API PRICE PER MILLION INPUT TOKENS

Kestrel 3 $3.00

Kestrel 4 $1.20

MODEL RELEASES • CONFIRMED

Kestrel Labs cuts prices 60% with Kestrel 4 – and gives a smaller model away

The new model family is cheaper to run and, on the company's own tests, better at code. The price, not the benchmark, is the story.

Kestrel Labs released Kestrel 4 on Thursday, pricing its flagship API at $1.20 per million input tokens, 60% below Kestrel 3. It also published Kestrel 4 Mini with open weights under a licence that permits commercial use.

The company says Kestrel 4 completes 71% of tasks on its internal coding benchmark, up from

TODAY MY TOPICS SETTING

safety evaluations but does not disclose training compute.

Hands-on testing by Circuit Review found the Mini model runs on a single 48GB workstation GPU, putting a capable model within reach of teams that cannot or will not send data to a cloud provider.

WHY IT MATTERS

For most companies, AI spending is limited by cost per task rather than by raw capability. A cut of this size changes which projects survive a budget review.

WHAT CHANGED

A frontier lab releasing open weights alongside a 60% price cut resets the floor for what buyers

REGULATION • CONFIRMED

Draft rules would require independent audits before major AI model releases

The Atlantic Digital Standards Board has published its first detailed code. The open question is who it covers.

The Atlantic Digital Standards Board published a draft code on Thursday that would require developers of the most capable general-purpose models to commission an independent audit before release and to publish a summary of the results.

Consultation closes on 15 December. The Board intends final rules to apply from 1 July

clear enough to apply.

WHY IT MATTERS

Pre-release audits would add time and cost to every major launch, and create a market for auditors that barely exists today.

LEARN MORE →

- Charts carry only sourced figures (the quality gate checks every value)

A frontier lab releasing open weights alongside a 60% price cut resets the floor for what buyers expect to pay.

WHAT HAPPENS NEXT

Analysts expect rivals to respond on price within weeks. Independent benchmark results should follow.

LEARN MORE →

HARDWARE • CONFIRMED

Varda says AI chip lead times have fallen to nine weeks, from 26

The shortage that shaped two years of AI spending is easing. Smaller buyers stand to gain most.

Varda Semiconductor said lead times for its V-series AI accelerators have fallen to nine weeks, from 26 weeks a year ago. Data-centre revenue rose 41% year on year to $8.4bn.

The company expects supply to stay balanced through the first half of 2027. Shares rose 6% in after-hours trading, Meridian Wire reported.

LEAD TIME FOR V-SERIES ACCELERATORS, WEEKS

Source: Varda Semiconductor

WHY IT MATTERS

Access to chips, more than money or talent, has decided who could build and run large AI systems. Shorter queues open the door to smaller cloud providers and enterprises that could not secure allocation.

LEARN MORE →

ENTERPRISE ADOPTION • CONFIRMED

38% of companies now run AI in production. Only 9% can show savings

Adoption is accelerating. Proof of return is not.

A Halberd Institute survey of 1,200 companies found 38% have at least one AI system in production, up from 22% a year earlier. Only 9% report measurable cost savings at company level.

Data quality was the most cited barrier (61%), ahead of cost (47%). The results are self-reported.

COMPANIES WITH AI IN PRODUCTION, %

Source: Halberd Institute

WHY IT MATTERS

The gap between deployment and measurable savings is where AI budgets will be tested in next year's planning rounds.

S11 Section — Food

One story today. Food didn't get an equal share just because it is a topic.

Food

1 STORY

COMMODITIES · REPORTED

Cocoa falls 18% on a larger harvest forecast. Shelves will lag

Chocolate makers buy months ahead; shoppers are unlikely to see the change before spring.

Cocoa futures have fallen 18% over the past month, Meridian Wire reports, as forecasts point to a larger West African harvest. The International Cocoa Producers' Forum now puts the 2026/27 global crop at 5.1 million tonnes, up 9% on last season.

Prices remain about twice their 2022 average. Because manufacturers buy cocoa months in advance, lower futures typically take six to nine months to reach shelf prices.

WHY IT MATTERS

Cocoa has been one of the sharpest pressures on confectionery costs. Manufacturers' margins will recover well before shelf prices fall.

S14 The big one today

Lead story with illustration, “The short version”, a sourced chart, “Why people care”, an attributed quote and a “Did you know?”.

01 FARMING • CONFIRMED

The big one today

A dry September just shrank the wheat harvest

And yes — eventually, that’s about the price of your bread.

The short version: **Dry month, smaller harvest, pricier wheat. Bread later, maybe.**

The National Grain Council now expects 7% less wheat this season: 24.6 million tonnes. The reason is simple. September brought just 38% of its usual rain.

Markets moved fast: wheat futures jumped 4.2% to a four-month high. On the farm, some growers are holding back fertiliser on fields that probably won’t make it anyway.

Will bread cost more? Maybe, but slowly. Flour is only about 20% of the price of a loaf, so bakers say changes trickle through rather than land overnight.

WHEAT PRODUCTION FORECAST, MILLION TONNES

Source: National Grain Council

Why people care

Less wheat squeezes millers, animal feed and exports all at once. For farmers, every decision right now is basically a bet on rain.

> *“Every input decision is now a bet on rain.”*
> — Pieter van Wyk, Grower, via Field & Furrow

DID YOU KNOW?

Flour is roughly 20% of the price of a standard loaf. The rest is labour, energy, packaging and margin.

Tell me more →

- Translated, not dumbed down: the numbers are identical to Business

S15 A full story, alternating layout

Art alternates sides; the emerging-evidence caveat is said plainly (“Big caveat: the study hasn’t been peer reviewed yet”).

Science corner

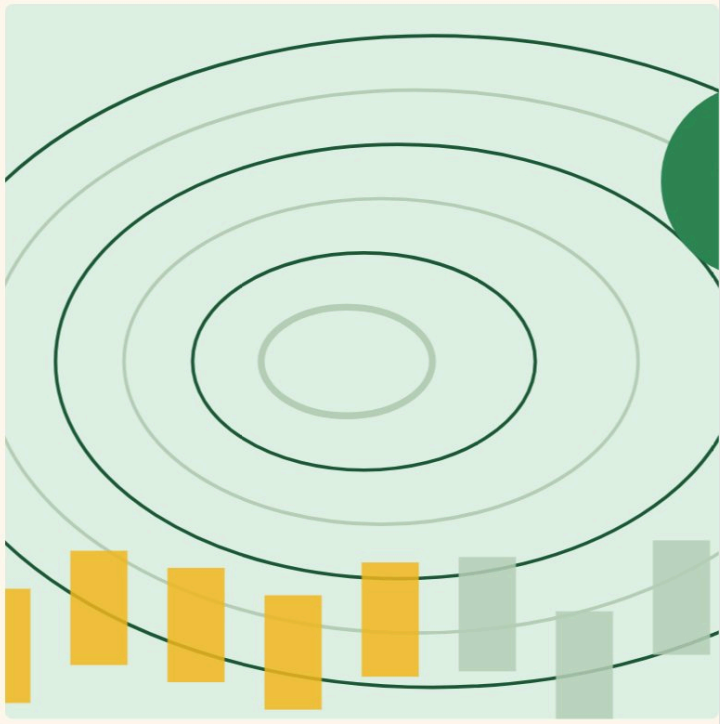

An AI just got better at predicting the weather

Ten days out, it beat the traditional model most of the time. Farmers are paying attention.

The short version: **Promising early results. Not peer reviewed yet.**

Researchers at the Northern Meteorological Service and Aster Systems built a machine-learning weather model. Over two years of testing, it beat the best traditional model on 87% of the things they measured, 10 days ahead.

Big caveat: the study hasn’t been peer reviewed yet. The service will run it next to its usual model from November, but official forecasts won’t change for now.

Why it’s a big deal

If you farm, ten days of reliable weather is the difference between guessing and planning when to plant, spray or harvest.

> *“Ten days is the difference between guessing and planning.”*
>
> — Thandi Mokoena, Agronomist, via Field & Furrow

Tell me more →

S16 A standard story

Stories without art get a big number in the margin and a readable line length.

03

FARMING • CONFIRMED

Look, no driver

This tractor is now allowed to farm by itself

One person can keep an eye on up to four of them remotely.

The short version: **Self-driving tractors get the green light.**

Regulators have cleared the Fieldwright AT-7 to work fields with nobody on site, as long as it stays inside a virtual fence and someone supervises remotely — up to four machines each.

Fieldwright says deliveries start in March 2027, as a subscription. Why the interest? Contractors simply can't find enough drivers for night shifts.

Why it matters to you

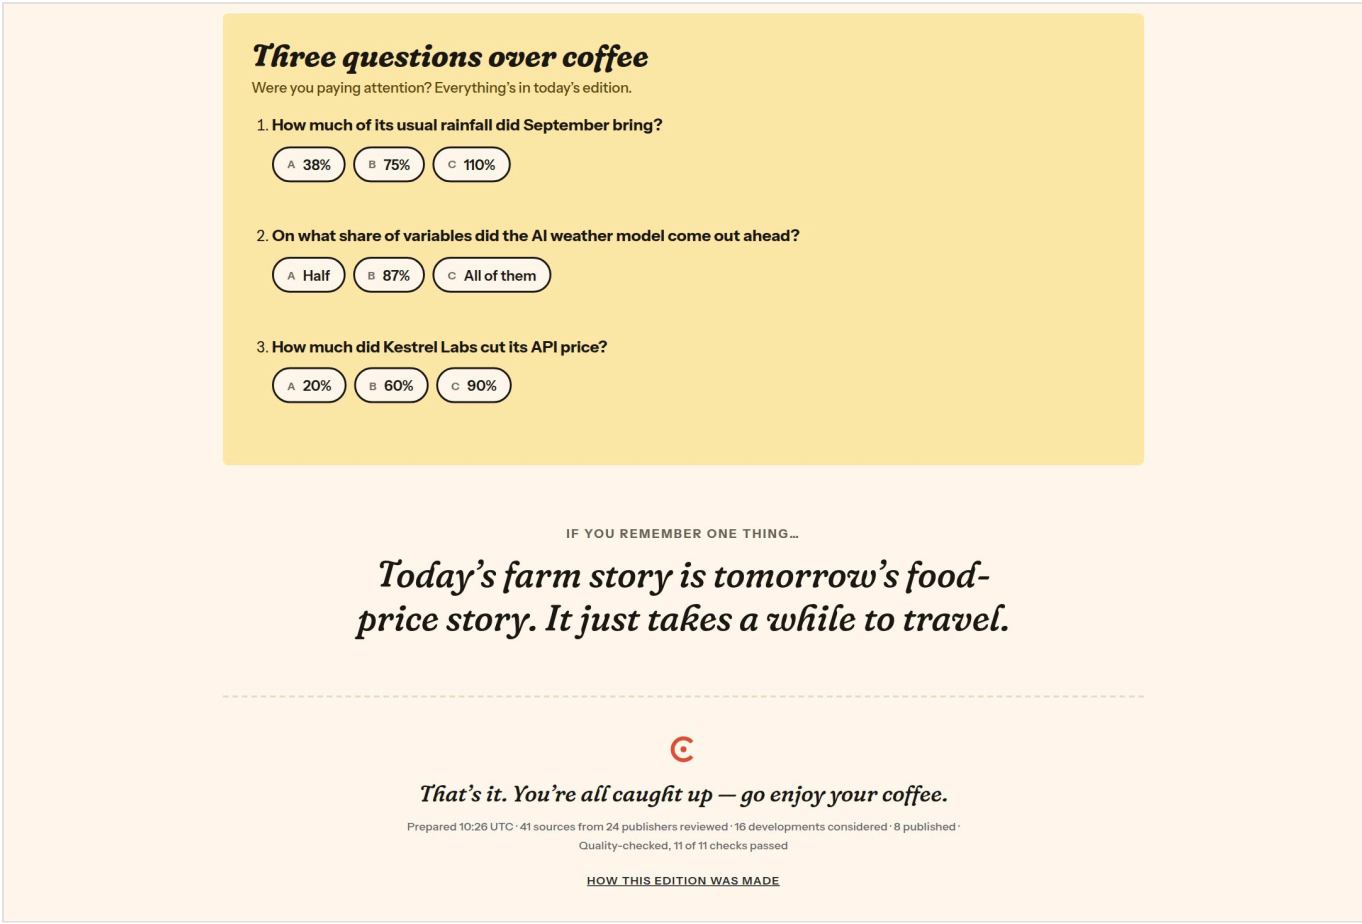

This is the step that turns "cool robot demo" into "actual way to run a farm".

> *"We can't find drivers for night shifts."*
>
> — Ruth Adeyemi, Agricultural contractor, via Field & Furrow

S20 1/2 Story view — the full story

The story, What happened (timeline), Why it matters, What changed, What people are saying, What happens next — and "How we know": every claim with its status and the sources behind it. A legend explains the labels; related developments link across the edition.

THE STORY

The National Grain Council cut its forecast for the 2026/27 wheat harvest by 7% on Thursday, to 24.6 million tonnes. September rainfall across the main growing regions was 38% of the long-term average.

Wheat futures rose 4.2% to a four-month high after the revision. On drought-hit fields, some growers are reducing nitrogen applications rather than spending on crops unlikely to reach yield targets.

Further along the chain, the Bakers' Federation says flour makes up roughly 20% of the price of a standard loaf, so a sustained rise in wheat would reach bread prices gradually rather than all at once.

WHEAT PRODUCTION FORECAST, MILLION TONNES

Source: National Grain Council

WHAT HAPPENED

September	Rainfall reaches 38% of the long-term average across the main
1 Oct · 08:00 UTC	The National Grain Council cuts its wheat forecast to 24.6 million tonnes.
1 Oct · 11:30 UTC	Wheat futures rise 4.2% to a four-month high.
1 Oct · 13:00 UTC	Growers report cutting nitrogen on drought-hit fields.
2 Oct · 05:30 UTC	The Bakers' Federation outlines how wheat prices pass through to bread.

WHY IT MATTERS

A smaller harvest tightens supply for millers, livestock feed and exporters at the same time. For growers, it turns every remaining input decision into a judgement about rain.

WHAT CHANGED

The previous estimate, published in September, assumed average rainfall. This is the

FRIDAY, 2 OCTOBER 2026 — YOUR 4-MINUTE EDITION

Over Coffee

AI — Good morning. Here's what matters. — FIVE THINGS WORTH KNOWING TODAY

KESTREL 4 API PRICE	AI CHIP LEAD TIME	FIRMS RUNNING AI IN PRODUCTION
$1.20 per M tokens	9 weeks	38%
▼ from $3.00 · Kestrel 3	▼ from 26 · A year ago	▲ from 22% · A year ago

AI · MODEL RELEASES · CONFIRMED

Kestrel Labs cuts prices 60% with Kestrel 4 — and gives a smaller model away

The new model family is cheaper to run and, on the company's own tests, better at code. The price, not the benchmark, is the story.

Kestrel Labs released Kestrel 4 on Thursday, pricing its flagship API at $1.20 per million input tokens, 60% below Kestrel 3. It also published Kestrel 4 Mini with open weights under a licence that permits commercial use.

The company says Kestrel 4 completes 71% of tasks on its internal coding benchmark, up from 54%. That figure has not been independently tested. The technical report includes outside safety evaluations but does not disclose training compute.

Hands-on testing by Circuit Review found the Mini model runs on a single 48GB workstation GPU, putting a capable model within reach of teams that cannot or will not send data to a cloud provider.

API PRICE PER MILLION INPUT TOKENS

Source: Kestrel Labs

TODAY IN BRIEF

1. Kestrel Labs cut its API price 60% with Kestrel 4 and released a smaller open-weights model.
2. A draft code would require independent audits before the most capable AI models are released.
3. An AI weather model beat physics-based forecasts at 10 days in an early, unreviewed study.
4. Varda says waits for AI chips are down to nine weeks from 26 — the shortage is easing.
5. AI in production rose to 38% of surveyed firms, but only 9% report savings.

ONE THING TO REMEMBER

Capable AI is getting cheaper faster than it is getting smarter. Budgets, not breakthroughs, will set the pace of adoption.

IN THIS EDITION

N1 · PAGE 1

WHY IT MATTERS

For most companies, AI spending is limited by cost per task rather than by raw capability. A cut of this size changes which projects survive a budget review.

WHAT CHANGED

A frontier lab releasing open weights alongside a 60% price cut resets the floor for what buyers expect to pay.

WHAT HAPPENS NEXT

Analysts expect rivals to respond on price within weeks. Independent benchmark results should follow.

AI — LEAD STORY ON THE FRONT PAGE · 4 MORE STORIES

REGULATION · CONFIRMED

Draft rules would require independent audits before major AI model releases

The Atlantic Digital Standards Board has published its first detailed code. The open question is who it covers.

The Atlantic Digital Standards Board published a draft code on Thursday that would require developers of the most capable general-purpose models to commission an independent audit before release and to publish a summary of the results.

Consultation closes on 15 December. The Board intends final rules to apply from 1 July 2027. Industry groups say the threshold that decides which models are covered is not yet clear enough to apply.

Capacity is a practical constraint: the Auditing Standards Forum says fewer than 10 organisations can currently conduct audits of this kind.

WHY IT MATTERS

Pre-release audits would add time and cost to every major launch, and create a market for auditors that barely exists today.

WHAT HAPPENS NEXT

Expect detailed industry submissions before the December deadline, most of them focused on the threshold.

LEARN MORE overcoffee.app/p/preview-single-1/01-ai-audit-code

RESEARCH · FORECASTING

ONGOING · NOT YET PEER REVIEWED

A learned weather model beats physics on 10-day forecasts, in a study not yet peer reviewed

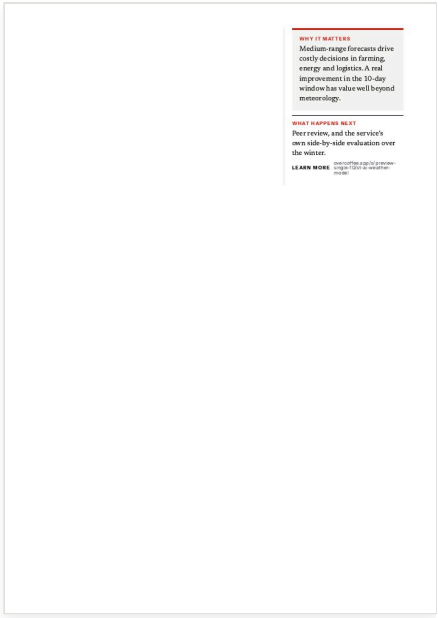

The Northern Meteorological Service will run it alongside its existing model from November. Growers are watching closely.

A machine-learning weather model developed by the Northern Meteorological Service and Aster Systems was more accurate than the leading physics-based model on 87% of the variables tested over a two-year evaluation, according to a preprint published this week. The paper has not yet been peer reviewed.

The service will run the model operationally alongside its physics model from November, while continuing to issue official forecasts from the physics model.

For agriculture, the useful horizon matters most. Agronomists say a reliable 10-day window would change how growers time planting, spraying and harvest.

N1 · PAGE 2

WHY IT MATTERS

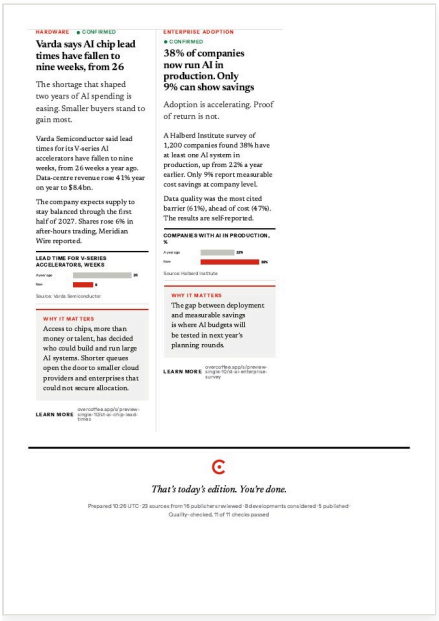

Medium-range forecasts drive costly decisions in farming, energy and logistics. A real improvement in the 10-day window has value well beyond meteorology.

WHAT HAPPENS NEXT

Peer review, and the service's own side-by-side evaluation over the winter.

LEARN MORE overcoffee.app/p/preview-single-1/01-ai-weather-model

N1 · PAGE 3

HARDWARE · CONFIRMED

Varda says AI chip lead times have fallen to nine weeks, from 26

The shortage that shaped two years of AI spending is easing. Smaller buyers stand to gain most.

Varda Semiconductor said lead times for its V-series AI accelerators have fallen to nine weeks, from 26 weeks a year ago. Data-centre revenue rose 41% year on year to $8.4bn.

The company expects supply to stay balanced through the first half of 2027. Shares rose 6% in after-hours trading, Meridian Wire reported.

LEAD TIME FOR V-SERIES ACCELERATORS, WEEKS

Source: Varda Semiconductor

WHY IT MATTERS

Access to chips, more than money or talent, has decided who could build and run large AI systems. Shorter queues open the door to smaller cloud providers and enterprises that could not secure allocation.

LEARN MORE overcoffee.app/p/preview-single-1/04-ai-chip-lead-times

ENTERPRISE ADOPTION · CONFIRMED

38% of companies now run AI in production. Only 9% can show savings

Adoption is accelerating. Proof of return is not.

A Halberd Institute survey of 1,200 companies found 38% have at least one AI system in production, up from 22% a year earlier. Only 9% report measurable cost savings at company level.

Data quality was the most cited barrier (61%), ahead of cost (47%). The results are self-reported.

COMPANIES WITH AI IN PRODUCTION, %

Source: Halberd Institute

WHY IT MATTERS

The gap between deployment and measurable savings is where AI budgets will be tested in next year's planning rounds.

AI · FOOD · FARMING

Good morning. Here's what matters.

EIGHT THINGS WORTH KNOWING TODAY

WHEAT HARVEST FORECAST	KESTREL 4 API PRICE	AI CHIP LEAD TIME	FIRMS RUNNING AI IN PRODUCTION
24.6 m tonnes	$1.20 per M tokens	9 weeks	38%
▼ from 26.5 · September estimate	▼ from $3.00 · Kestrel 3	▼ from 26 · A year ago	▲ from 22% · A year ago

FARMING · HARVEST OUTLOOK · CONFIRMED

A dry September cuts the wheat forecast by 7%, and the effects reach well beyond the farm

The National Grain Council now expects 24.6 million tonnes. Futures are at a four-month high; millers and bakers are watching.

The National Grain Council cut its forecast for the 2026/27 wheat harvest by 7% on Thursday, to 24.6 million tonnes. September rainfall across the main growing regions was 38% of the long-term average.

Wheat futures rose 4.2% to a four-month high after the revision. On drought-hit fields, some growers are reducing nitrogen applications rather than spending on crops unlikely to reach yield targets.

Further along the chain, the Bakers' Federation says flour makes up roughly 20% of the price of a standard loaf, so a sustained rise in wheat would reach bread prices gradually rather than all at once.

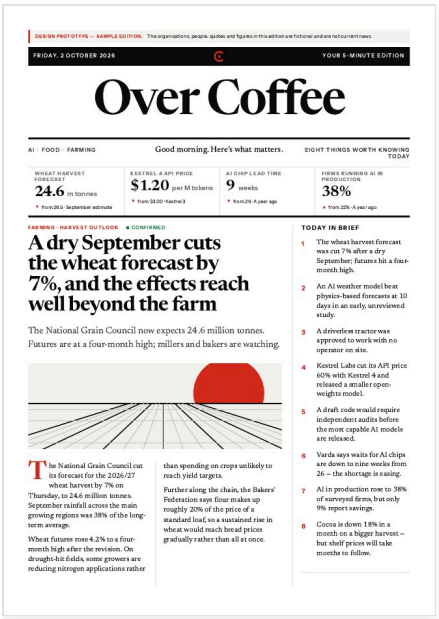

TODAY IN BRIEF

1. The wheat harvest forecast was cut 7% after a dry September; futures hit a four-month high.
2. An AI weather model beat physics-based forecasts at 10 days in an early, unreviewed study.
3. A driverless tractor was approved to work with no operator on site.
4. Kestrel Labs cut its API price 60% with Kestrel 4 and released a smaller open-weights model.
5. A draft code would require independent audits before the most capable AI models are released.
6. Varda says waits for AI chips are down to nine weeks from 26 — the shortage is easing.
7. AI in production rose to 38% of surveyed firms, but only 9% report savings.
8. Cocoa is down 18% in a month on a bigger harvest — but shelf prices will take months to follow.

Five things worth knowing · about 3 minutes

AI

The 30-second version

1. Kestrel 4 is out, it's 60% cheaper, and there's a free mini version.
2. Draft rules would make the biggest AI models pass an outside audit before launch.
3. An AI weather model beat the usual one 10 days out — early days, not yet peer reviewed.
4. The wait for AI chips is down from 26 weeks to nine.
5. More firms use AI, but only 9% can prove it saves money.

01 AI ● CONFIRMED

Okay, here's what happened

AI just got a lot cheaper

Kestrel Labs launched Kestrel 4 — and cut its price by 60%.

The short version: Cheaper, a bit smarter, and a free mini version you can run yourself.

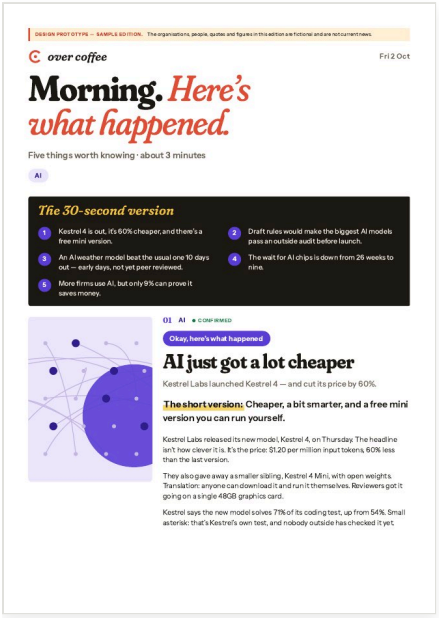

Kestrel Labs released its new model, Kestrel 4, on Thursday. The headline isn't how clever it is. It's the price: $1.20 per million input tokens, 60% less than the last version.

They also gave away a smaller sibling, Kestrel 4 Mini, with open weights. Translation: anyone can download it and run it themselves. Reviewers got it going on a single 48GB graphics card.

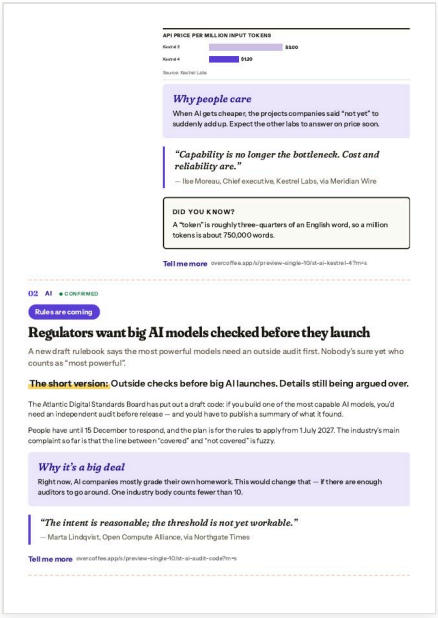

Kestrel says the new model solves 71% of its coding test, up from 54%. Small asterisk: that's Kestrel's own test, and nobody outside has checked it yet.

Eight things worth knowing · about 5 minutes

AI · Food · Farming

The 30-second version

1. A dry September shrank the wheat harvest by 7%.
2. An AI weather model beat the usual one 10 days out — early days, not yet peer reviewed.
3. A self-driving tractor got approval to work with nobody on site.
4. Kestrel 4 is out, it's 60% cheaper, and there's a free mini version.
5. Draft rules would make the biggest AI models pass an outside audit before launch.
6. The wait for AI chips is down from 26 weeks to nine.
7. More firms use AI, but only 9% can prove it saves money.
8. Cocoa is down 18% — but don't expect cheaper chocolate before spring.

01 FARMING · CONFIRMED

The big one today

A dry September just shrank the wheat harvest

And yes — eventually, that's about the price of your bread.

The short version: Dry month, smaller harvest, pricier wheat. Bread later, maybe.

The National Grain Council now expects 7% less wheat this season: 24.6 million tonnes. The reason is simple. September brought just 38% of its usual rain.

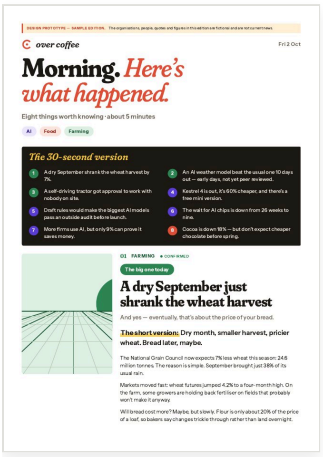

Markets moved fast: wheat futures jumped 4.2% to a four-month high. On the farm, some growers are holding back fertiliser on fields that probably won't make it anyway.

Will bread cost more? Maybe, but slowly. Flour is only about 20% of the price of a loaf, so bakers say changes trickle through rather than land overnight.

N4 · PAGE 1

WHEAT PRODUCTION FORECAST, MILLION TONNES

Why people care

Less wheat squeezes millers, animal feed and exports all at once. For farmers, every decision right now is basically a bet on rain.

"Every input decision is now a bet on rain."
— Pieter van Wijk, Grower, via Field & Furrow

DID YOU KNOW?

Flour is roughly 20% of the price of a standard loaf. The rest is labour, energy, packaging and margin.

Tell me more

02 FARMING · EMERGING · NOT YET PEER REVIEWED

Science corner

An AI just got better at predicting the weather

Ten days out, it beat the traditional model most of the time. Farmers are paying attention.

The short version: Promising early results. Not peer reviewed yet.

Researchers at the Northern Meteorological Service and Aster Systems built a machine-learning weather model. Over two years of testing, it beat the best traditional model on 67% of the things they measured, 10 days ahead.

Big caveat: the study hasn't been peer reviewed yet. The service will run it next to its usual model from November, but official forecasts won't change for now.

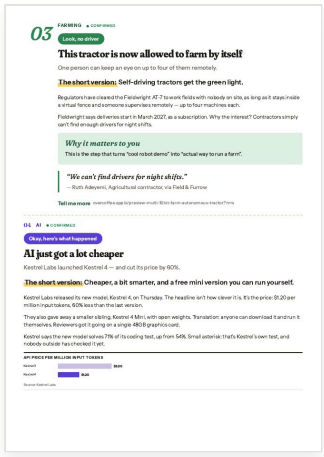

Why it's a big deal

If you farm, ten days of reliable weather is the difference between guessing and planning when to plant, spray or harvest.

"Ten days is the difference between guessing and planning."
— Thandi Mokoena, Agronomist, via Field & Furrow

Tell me more

N4 · PAGE 2

03 FARMING · CONFIRMED

Look, no driver

This tractor is now allowed to farm by itself

One person can keep an eye on up to four of them remotely.

The short version: Self-driving tractors get the green light.

Regulators have cleared the Fieldwright AT-7 to work fields with nobody on site, as long as it stays inside a virtual fence and someone supervises remotely — up to four machines each.

Fieldwright says deliveries start in March 2027, as subscription. Why the interest? Contractors simply can't find enough drivers for night shifts.

Why it matters to you

This is the step that turns "cool robot demo" into "actual way to run a farm".

"We can't find drivers for night shifts."
— Ruth Adeyemi, Agricultural contractor, via Field & Furrow

Kestrel Labs released its new model, Kestrel 4, on Thursday. The headline isn't how clever it is. It's the price: $1.20 per million input tokens, 60% less than the last version.

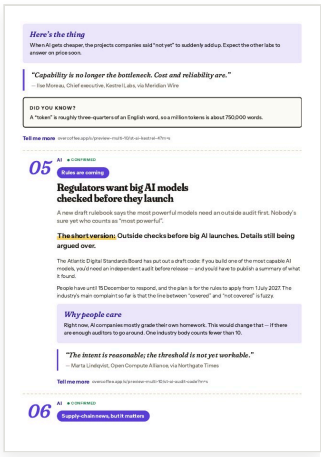

They also gave away a smaller sibling, Kestrel 4 Mini, with open weights. Translation: anyone can download it and run it themselves. Reviewers got it going on a single 480 B graphics card.

Kestrel says the new model solves 71% of its coding test, up from 64%. Small asterisk: that's Kestrel's own test, and nobody outside has checked it yet.

API PRICE PER MILLION INPUT TOKENS

Source: Kestrel Labs

N4 · PAGE 3

Here's the thing

When AI gets cheaper, the projects companies said "not yet" to suddenly add up. Expect the other labs to answer on price soon.

"Capability is no longer the bottleneck. Cost and reliability are."
— Ilse Moreau, Chief executive, Kestrel Labs, via Meridian Wire

DID YOU KNOW?

A "token" is roughly three-quarters of an English word, so a million tokens is about 750,000 words.

Tell me more

05 AI · CONFIRMED

Rules are coming

Regulators want big AI models checked before they launch

A new draft rulebook says the most powerful models need an outside audit first. Nobody's sure yet who counts as "most powerful".

The short version: Outside checks before big AI launches. Details still being argued over.

The Atlantic Digital Standards Board has put out a draft code. If you build one of the most capable AI models, you'd need an independent audit before release — and you'd have to publish a summary of what it found.

People have until 15 December to respond, and the plan is for the rules to apply from 1 July 2027. The industry's main complaint so far is that the line between "covered" and "not covered" is fuzzy.

Why people care

Right now, AI companies mostly grade their own homework. This would change that — if there are enough auditors to go around. One industry body counts fewer than 10.

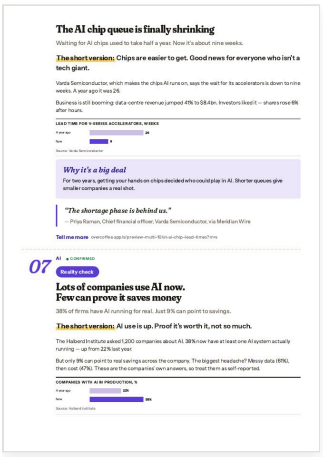

"The intent is reasonable; the threshold is not yet workable."
— Marta Lindqvist, Open Compute Alliance, via Northgate Times

Tell me more

06 AI · CONFIRMED

Supply-chain news, but it matters

N4 · PAGE 4

The AI chip queue is finally shrinking

Waiting for AI chips used to take half a year. Now it's about nine weeks.

The short version: Chips are easier to get. Good news for everyone who isn't a tech giant.

Varda Semiconductor, which makes the chips AI runs on, says the wait for its accelerators is down to nine weeks. A year ago it was 26.

Business is still booming: data-centre revenue jumped 41% to $8.4bn. Investors liked it — shares rose 6% after hours.

LEAD TIME FOR H-SERIES ACCELERATORS, WEEKS

Source: Varda Semiconductor

Why it's a big deal

For two years, getting your hands on chips decided who could play in AI. Shorter queues give smaller companies a real shot.

"The shortage phase is behind us."
— Priya Raman, Chief financial officer, Varda Semiconductor, via Meridian Wire

N4 · PAGE 5

Why it matters to you

Everyone's trying it. The next question bosses will ask is: "Is it paying off?"

Tell me more

08 FOOD · REPORTED

Sweet-ish news

Chocolate is getting cheaper to make. Just not to buy (yet)

Cocoa prices dropped 18% this month. Your chocolate bar won't notice until spring.

The short version: Cheaper cocoa now, cheaper chocolate... eventually.

Cocoa prices have fallen 18% in a month, market reports say, because the West African harvest is looking bigger — 5.1 million tonnes worldwide, up 9%.

So why isn't chocolate cheaper? Makers buy their cocoa months ahead, so price drops take six to nine months to reach the shelf. And cocoa is still about twice what it cost in 2022.

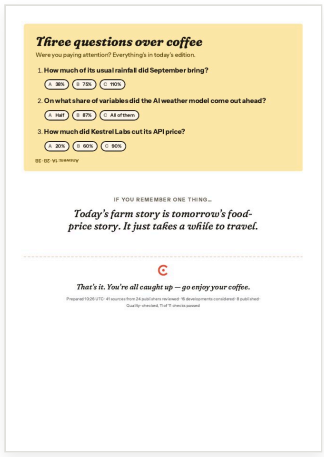

Here's the thing

Chocolate makers get relief first. Shoppers come later.

"Don't expect cheaper chocolate this Christmas."
— Ana Ruiz, Commodities analyst, Corlett & Pine, via The Ledger

Three questions over coffee

Were you paying attention? Everything's in today's edition.

1. How much of its usual rainfall did September bring?
A 38% B 73% C 110%

2. On what share of variables did the AI weather model come out ahead?
A Half B 87% C All of them

3. How much did Kestrel Labs cut its API price?
A 20% B 60% C 90%

IF YOU REMEMBER ONE THING...

Today's farm story is tomorrow's food-price story. It just takes a while to travel.

That's it. You're all caught up — go enjoy your coffee.

Prepared 10:05 UTC · 41 sources from 24 publishers reviewed · 11 developments considered · 8 published · Quality-checked, that'll checks passed

N4 · PAGE 7

An honest account.

REAL AND WORKING

- The reader app, onboarding, topics, settings, download, comparison and edition record
- The engine: research cache, clustering, verification, scoring, budgeted editing, quality gate
- Newspaper renderer (web + PDF) in both voices; story, source and audio layers
- Database with full edition records for audit and regeneration
- Live RSS research mode (tested: 58 real articles today)

SAMPLE

- The research corpus and the authored copy for it — all fictional, labelled everywhere
- The "assess" and "write" steps use authored fixtures so editions are reproducible

NEXT FOR PRODUCTION

- Model-backed assessment and writing on live research (Claude writer is built, not yet run against the API)
- Better topic relevance for live feeds
- Accounts, a durable scheduler, real email and voice providers
- Future, kept outside the reader experience: one sponsor per edition, industry editions (e.g. Hazardous Area Daily), ecosystem integrations through the edition API
